Message from the FutureTech2017 Program Chairs

Welcome to the 12th International Conference on Future Information Technology (FutureTech 2017), which will be held in Seoul, Korea on May 22-24, 2017. FutureTech2017 will be the most comprehensive conference focused on the various aspects of information technologies. It will provide an opportunity for academic and industry professionals to discuss recent progress in the area of future information technologies. In addition, the conference will publish high quality papers which are closely related to the various theories and practical applications in multimedia and ubiquitous engineering. Furthermore, we expect that the conference and its publications will be a trigger for further related research and technology improvements in these important subjects.

For FutureTech2017, we received many paper submissions, after a rigorous peer review process, we accepted only articles with high quality for the FutureTech2017 proceedings, published by the Springer. All submitted papers have undergone blind reviews by at least two reviewers from the technical program committee, which consists of leading researchers around the globe. Without their hard work, achieving such a high-quality proceeding would not have been possible. We take this opportunity to thank them for their great support and cooperation. We would like to sincerely thank the following invited speakers who kindly accepted our invitations, and, in this way, helped to meet the objectives of the conference: Prof. Weijia Jia, Director of Cyber-Space Intelligent Computing Lab, Shanghai Jiaotong University, China and Prof. Han-Chieh Chao, President of National Dong Hwa University, Taiwan. Finally, we would like to thank all of you for your participation in our conference, and also thank all the authors, reviewers, and organizing committee members. Thank you and enjoy the conference!

A Bacteria-Inspired Solution for 5G Mobile Communication

Dr. Han-Chieh Chao

President
National Dong Hwa University
Taiwan

Abstract

A surge of innovation in technologies for 5G mobile communication is on the horizon, but its specification is still just being discussed. The only know is that 5G must introduce many novel hardware/software techniques, service types and network interfaces due to the requirement. There is very frequent interaction between these components that is like an ecosystem. An ecosystem has a very diverse species so that there are complex interaction happened. However, it can always maintain a balanced state because an ecosystem is a Self-Organizing Network (SON). 5G should consider to concept of SON so that the interaction of 5G functions can be well managed. This is the first step towards ecosystem by using biologically inspired method. This speech will introduce what is the biologically inspired method and how to use it for the real environment. Finally, we will present a novel network platform for 5G mobile communication system, viz Software Defined Wireless Bacteria-Inspired Network (SDWBIN). The SDWBIN platform integrates the concepts of molecular and bacterial communication into traditional mobile communications so that the features of molecule and bacteria (i.e., perception, infection and diffusion) could be applied to end devices, such as vehicle-to-vehicle, machine-to-machine and device-to-device. In order to realize the design of SDWBIN platform, we exploit the framework of Software Defined Wireless Network to implement the core network in SDWBIN. We expect that the proposed SDWBIN platform can tackle with the communication from an enormous number of devices in 5G systems.
